

ROCKFORD SEPARATORS

# The Undisputed Winner!

*A Rockford Separator is designed for exceptionally high efficiency in retaining a wide variety of insoluble wastes. Maximum water travel without turbulence through the filtering action of its screens prevents evacuation into drainage systems which may cause blocking, stoppages and backups.*

*Separation is our sole business: we have supplied quality separation systems to the plumbing industry for over 35 years.*

*These units are just part of the Rockford Separator family – more than 26 varieties in over 200 sizes, engineered and custom-built in the USA for job-site specific applications and installed wherever separation systems are required.*

*Go with the Winner: phone, fax, Email or visit our web site.*
